Lumifi ShieldVision™

ENTERPRISE-LEVEL PROTECTION FOR ALL

ShieldVision™ by Lumifi is a proprietary technology that acts as a singular, multi-tenant platform. It is tailored for managing security tools and increasing tool interoperability within the SOC (Security Operations Center) visibility triad. ShieldVision™ provides intuitive tool functionality management, making it easier for clients to handle various aspects of their security operations.

What Challenges Does ShieldVision™ Solve?

ShieldVision™ addresses several challenges, including:

- Complexity of managing and maturing security tools.
- The need to manage diverse log sources effectively.
- Time-consuming processes of building reports and custom use cases.
- Difficulty in creating and managing alerts.
- The need for increased interoperability between different security tools.

Benefits of ShieldVision™

- Enhanced ability to react to security threats and breaches.
- Fortified security environments.
- Optimize & automate business operations by driving high-fidelity alerts, reducing false positives, and streamlining investigations.
- Intuitive tool functionality management.
- Reduced time spent on maturing tools and managing log sources.
- Simplified report building, custom use case development, and alert creation.
- A comprehensive and malleable platform that can be tailored to specific needs.
- Improved overall security posture through meaningful data optimization.
- Advanced alerting and threat hunting. Orchestrates intelligence gathering and automates threat hunting to generate scans and alerts with repeatable clarity and precision.
- A single cohesive Saas platform for SOC service and cybersecurity, enabling security teams to customize and automate SIEM, EDR, and NDR response.

Why ShieldVision™?

Lumifi ShieldVision™ is designed to make clients' data and security telemetry comprehensible and usable. By enabling clients to react to threats and breaches more effectively, ShieldVision helps in fortifying security environments and optimizing business operations. It simplifies the management of security tools and reduces the time needed for tool maturation, log source management, report building, custom use case development, and alert creation.
