Managed Detection and Response

INVEST IN YOUR DEFENSE.

Lumifi Cyber Advantages

- Reduced Time to Detect
- Monthly & Quarterly Reporting
- Reduced Time to Respond
- Integrated Security Ecosystem
- Focused Alerts
- Environment Trend Visibility

In today's cyber security landscape, email and traditional anti-virus tools are no longer sufficient for organizations looking to defend against advanced persistent threats and targeted attacks. Lumifi helps organizations create and maintain a sophisticated security strategy through tools, processes, and experts.

Lumifi Cyber Philosophy

According to Gartner, not one single tool, but three security tools for SIEM, NDR, and EDR/XDR garner the best data and contribute to optimal security posture. Lumifi Cyber leverages proprietary technology and partners with industry leaders to increase tool interoperability between elements of the triad.
Lumifi Cyber Approach

With more than 15 years of experience in Managed Detection and Response (MDR), Lumifi continues to improve customers' security posture with their unique approach.

DATA STEWARDSHIP
The management and oversight of an organization's data assets to help provide business users with high-quality data that is easily accessible and consistent.

CONTENT DEVELOPMENT
The policies and rules that govern a security provider to ensure threat mitigation is robust within an environment and has customization to continuously develop and ensure threat defense is optimal.

THREAT INTELLIGENCE MATURITY
The evidence-based knowledge about an existing or emerging menace or hazard to assets that can be used to inform decisions regarding the subject's response to that means or hazard.

PROACTIVE THREAT HUNTING
The process of proactively searching through networks or datasets to detect and respond to advanced cyberthreats that evade traditional or signature-based security controls.

BUILD A LASTING PARTNERSHIP
Forge a relationship that improves visibility and threat awareness, maximizes the potential of acquired technology, and matures security posture.

Telesystem
IT's About Trust

Co-Managed Model

Unlike traditional MSSPs, Lumifi delivers service through a co-managed model, where your data is stored in your environment and accessed remotely by a US-based team, providing full management of the security tool, rather than joint management of the security tool.

BENEFITS:

• Flexible Delivery Model

• GDPR Compliance – we do not host customer data

• Security team support model

• Additional service transparency

• Parser and rule access for continuous development

• Security team expertise and extension

LUMIFI'S PROPRIETARY TECHNOLOGY

Lumifi's cutting-edge technology ShieldVision™ combines continuous automated threat hunting with orchestration and response, pairing this with a proactive managed cybersecurity service to deliver continuous end-to-end protection for businesses nationwide against ransomware and the latest security threats.

In the same way that light waves slow down and separate when passing through a prism, client data, security telemetry, and the actions of both users and threat actors, become comprehensible and usable when passing through Lumifi's technology. ShieldVision™, enables clients to react to threats and breaches more effectively, resulting in fortified security environments and optimized business. ShieldVision™ provides its users with intuitive tool functionality management. Clients can expect to spend less time having to mature their tool, manage log sources, build reports, custom use cases, and build alerts.

ShieldVision™ is a singular, multi-tenant platform that provides solo users and service providers alike with a comprehensive platform that is malleable enough to be tailored to specific needs. ShieldVision™ equips teams with meaningful data intended to optimize day to day practices and improve overall security posture.
