

Certified Alarm/Elevator Line

SECURE. RELIABLE. COST-SAVING.

Telesystem provides a reliable phone service over a dedicated wireless network to provide emergency calling and other capabilities.

Telco providers are decommissioning POTS lines across the country at a rapid pace. As the number of copper lines decrease, your cost to keep a traditional phone line is increasing. Switch to Certified Alarm/Elevator Line Replacement to save money while continuing to provide service to essential devices.

Telesystem's Certified Alarm/Elevator Line Replacement options can be used with:

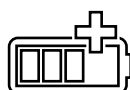

- Security Alarm Panels
- Fire Alarm Panels
- Elevator Phones
- Public Safety Phones

Due to aging networks, a shortage of parts, and a reduction in experienced technicians, Telecom carriers are in the process of decommissioning copper wire-based networks used to provide plain old telephone services (POTS) lines in the United States. In August of 2019, the FCC issued order 19-72A1, which acknowledged that POTS lines are no longer sustainable and setup for all U.S. POTS lines to be replaced with an alternative service. With services approaching termination, two immediate effects of this mandate are a continuous reduction in provided support and a continuous increase in the service's monthly costs. Telesystem's Certified Alarm/Elevator Line product addresses these concerns by providing a solution that includes built-in LTE and battery backup to ensure your essential lines are always connected.

Reduce Costs

Save money on your monthly phone bill by transitioning costly copper POTS lines

Backup Battery

Keeps working for at least 16 hours during power failures

Line-Safety Compliant

Managed voice channel is expected to meet regulatory requirements

Service Features

- Basic Dial Tone
- Local Number Portability - Retain Existing Phone Numbers
- Managed Facility Voice Network (MFVN)
- Detachable Extendable Antennas to Enhance LTE Signal
- RJ-45 Ethernet WAN with Failover to LTE
- Battery Backup
- LCD Display
- Wall Mount or Desktop
- Contact ID/DTMF Support
