

Managed Routers

Telesystem is guided by our customer-centric mission. For this reason, and unlike other carriers, we include a managed router with all of our ethernet solutions. Our managed routers relieve burden from our customer's IT Staff, as Telesystem:

- Configures the equipment
- Maintains the equipment
- Provides security patches
- Provides firmware updates
- Includes 24/7/365 support

Broadband Monitoring

Telesystem's network monitoring system includes Simple Network Monitoring Protocol (SNMP) which aides our customers by providing network performance metrics such as bandwidth utilization, network availability, and more.
